Art Unit

2155

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 03 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 17 September 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-12 and 14-19 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 14-19 is/are allowed.
- 6) ☒ Claim(s) 1-12 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 2155

DETAILED ACTION

Claims 1-12 and 14-19 are presented for examination.

Claim 13 has been cancelled.

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 07/19/2004 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 4 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kozdon et al. (Kozdon) (US 6,240,070) in view of VanDeusen et al. (VanDeusen) (US 6,598,172 B1).

Regarding claim 1, Kozdon teaches in a server process executing at a node on a computer network and operatively couple over the computer network to one or more client processes, selected to the client processes capable of transmitting an active stream of audio packets to the server process, selected of the client processes capable of receiving data from a single source (e.g., see fig. 2), a method for enabling audio conferencing (e.g., see abstract) comprising:

establishing a point-to-point communication connection with selected of a plurality of the client processes (e.g., see fig. 2 col. 3 lines 1-18);

identifying at least a first of the selected client processes which is transmitting an active stream of audio packets (e.g., see abstract and col.6 lines 53-65);

retransmitting the modified packets of the active stream of audio packets to others of the plurality of clients processes (e.g., see col. 3 lines 1-37).

Kozdon does not explicitly teach modifying one of the timestamp and source identifier of the packet headers in the active stream of audio packets.

VanDeusen teaches modifying one of the time stamp and source identifier of the packets headers in the active stream of audio packets (col. 2 lines 9-12 and col. 4 line 23-col. 5 line 38). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have utilized modifying step of VanDeusen in the process of modifying audio packets in Kozdon because such modifying step would enable the time stamps of the audio packets to be adjusted in order to compensate for any differential between the encoding and decoding clocks (VanDeusen, col. 5 lines 30-33).

Regarding claim 4, a computer program product of claim 4 has a corresponding method of claim 1; therefore, claim 4 is rejected under the same rationale as applied to claim 1.

Regarding claim 10, an apparatus of claim 10 has a corresponding method of claim 1; therefore, claim 10 is rejected under the same rationale as applied to claim 1.

3. Claims 2, 3, 5, 6, 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kozdon et al (Kozdon) (US 6,240,070 B1) in view of VanDeusen et al. (VanDeusen) (US 6,598,172 B1) in further view of Bruno et al (Bruno) (6,020,915).

Regarding claim 2, Kozdon-VanDeusen does not explicitly teach identifying at least a first of the selected client processes which is transmitting an active stream of video packets. However, Bruno teaches identifying at least a first of the selected client processes which is transmitting an active stream of video packets (e.g., see abstract). Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to combine the identifying step in the combination of teachings of Kozdon and VanDeusen as taught by Bruno because such identifying step would enable the multimedia participants to visually identify the presently talking end-user. This would expand the functionality of an analog voice-only non-H.320 compatible endpoint (Bruno, col. 2 lines 21-22).

Regarding claim 3, Kozdon-VanDeusen-Bruno teaches modifying one of the timestamp and source identifier and sequence number of the packet headers in the active stream of packets (VanDeusen, col.. 5 lines 27-35); and retransmitting the

Art Unit: 2155

modified packets of the active stream of packets to others of the plurality of client processes (Kozdon, col. 3 lines 1-37).

Regarding claim 5, Kozdon-VanDeusen does not explicitly teach identifying at least a first of the selected client processes which is transmitting an active stream of video packets. However, Bruno teaches identifying at least a first of the selected client processes which is transmitting an active stream of video packets (e.g., see abstract). Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to combine the identifying step in the combination of teachings of Kozdon and VanDeusen as taught by Bruno because such identifying step would enable the multimedia participants to visually identify the presently talking end-user. This would expand the functionality of an analog voice-only non-H.320 compatible endpoint (Bruno, col. 2 lines 21-22).

Regarding claim 6, Kozdon-VanDeusen-Bruno teaches modifying one of the timestamp and source identifier and sequence number of the packet headers in the active stream of packets (VanDeusen, col.. 5 lines 27-35); and retransmitting the modified packets of the active stream of packets to others of the plurality of client processes (Kozdon, col. 3 lines 1-37).

Regarding claim 11, Kozdon-VanDeusen does not explicitly teach identifying at least a first of the selected client processes which is transmitting an active stream of video packets. However, Bruno teaches identifying at least a first of the selected client processes which is transmitting an active stream of video packets (e.g., see abstract). Therefore, it would have been obvious to a person of ordinary skill in the art at the time

Art Unit: 2155

the invention was made to combine the identifying step in the combination of teachings of Kozdon and VanDeusen as taught by Bruno because such identifying step would enable the multimedia participants to visually identify the presently talking end-user. This would expand the functionality of an analog voice-only non-H.320 compatible endpoint (Bruno, col. 2 lines 21-22).

Regarding claim 12, Kozdon-VanDeusen-Bruno teaches modifying one of the timestamp and source identifier and sequence number of the packet headers in the active stream of packets (VanDeusen, col. 5 lines 27-35); and retransmitting the modified packets of the active stream of packets to others of the plurality of client processes (Kozdon, col. 3 lines 1-37).

3. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kozdon in view of VanDeusen in further view of Foster et al (Foster) (US 6,466,550).

Regarding claim 7, Kozdon teaches a computer data signal embodied in a carrier wave comprising:

a program code for establishing a point-to-point communication connection between a server process and a plurality of client processes (e.g., see fig. 2 col. 3 lines 1-18), selected of the client processes capable of transmitting a stream of audio packets to the server apparatus (e.g., see fig. 2);

program code for identifying at least a first of the selected plurality of client processes which is transmitting a stream of active audio packets (e.g., see abstract and col.6 lines 53-65); and

Art Unit: 2155

program code for retransmitting the modified packets of the active stream of active packets to others of the plurality of client processes (e.g., see col. 3 lines 1-37).

Kozdon does not explicitly teach a packet header and modifying one of the header fields as claimed.

VanDeusen teaches program code for modifying one of the time stamp and source identifier of the packet headers in the active stream of audio packets (e.g., see col. 15 lines 36-40 and col. 19 lines 3-4).

Foster teaches each packet having a packet header including a time stamp, source identifier and sequence number associated with the packet (e.g., see col. 6 lines 25-46).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the teaching of Kozdon with the teachings of VanDeusen and Foster because such modifying header field would enable the time stamps of the audio packets to be adjusted in order to compensate for any differential between the encoding and decoding clocks (VanDeusen, col. 5 lines 30-33).

4. Claims 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kozdon in view of VanDeusen in view of Foster in further view of Bruno et al (Bruno) (6,020,915).

Regarding claim 8, the combination of teachings of Kozdon, VanDeusen and Foster does not explicitly teaches identifying at least a first of the selected client processes which is transmitting an active stream of video packets. However, Bruno

Art Unit: 2155

teaches identifying at least a first of the selected client processes which is transmitting an active stream of video packets (e.g., see abstract). Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to combine the identifying step in the combination of teachings of Kozdon, VanDeusen and Foster as taught by Bruno because such identifying step would enable the multimedia participants to visually identify the presently talking end-user. This would expand the functionality of an analog voice-only non-H.320 compatible endpoint (Bruno, col. 2 lines 21-22).

Regarding claim 9, Kozdon-VanDeusen-Foster-Bruno teaches modifying one of the timestamp and source identifier and sequence number of the packet headers in the active stream of packets (VanDeusen, col. 5 lines 27-35); and retransmitting the modified packets of the active stream of packets to others of the plurality of client processes (Kozdon, col. 3 lines 1-37).

Allowable Subject Matter

5. Claims 14-19 are allowed.

Response to Arguments

6. Applicant's arguments with respect to claims 1-12 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 2155

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Oanh L. Duong whose telephone number is (703) 305-0295. The examiner can normally be reached on Monday- Friday, 8:00AM - 5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hosain T. Alam can be reached on (703) 308-6662. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
